The application has been amended as follows:

Claim 1 has been amended to read:

1. An apparatus for monitoring human autonomic nervous system activity using pulsatile blood volume waveform signals, said apparatus comprising:

a photoplethysmographic probe having a light emitting element and an opposing light detecting element, and having an output signal indicating changes in blood volume on at least one alpha adrenergic receptor site of a human body;

a processor element, responsive to said output signal indicating changes in blood volume, said processor element defining a time interval for calculation of slope of blood volume waveform continuously and in real time [for] and reducing said waveform signals to a slope value within said time interval;

said processor element containing an algorithm for normalization of the slope value [continuously and in real time];

said processor element containing an artifact rejection algorithm for eliminating from further processing slope values less than one; and amplifier and filter circuitry for rendering output signals representative of said slope values.
